Contents

Creating beamer presentation for right to left language (like arabic) using pdfLaTeX or XeLaTeX still poses many problems due to bugs not currently resolved especially for colors and hyperlinks

The LuaTeX team set solutions for these issues thanks to them and to *Javier Bezos* for his works on the package `babel` and `bidi` writing

How to use beamer-rl

```
\documentclass{beamer}
\usepackage{beamer-rl}
\babelprovide[import=ar-DZ, main]{arabic}
\babelfont{sf}{Amiri}

\mode<presentation>{\usetheme{Warsaw}}
\begin{document}
...
\end{document}
```

`\setbeamertemplate{blocks}[default]`

Lorem

On 21 April 1820, during a lecture, Ørsted noticed a compass needle deflected from magnetic north when an electric current from a battery was switched on and off.

`\setbeamertemplate{blocks}[rounded][shadow=true]`

Lorem

On 21 April 1820, during a lecture, Ørsted noticed a compass needle deflected from magnetic north when an electric current from a battery was switched on and off.

Theorems

.The proof uses *reductio ad absurdum*

Theorem

.*There is no largest prime number*

Proof

1. .*Suppose p were the largest prime number*
2. .*Let q be the product of the first p numbers*
3. .*Then $q + 1$ is not divisible by any of them*
4. *But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.*

Theorems

.The proof uses *reductio ad absurdum*

Theorem

.*There is no largest prime number*

Proof

.*Suppose p were the largest prime number* 1

.*Let q be the product of the first p numbers* 2

.*Then $q + 1$ is not divisible by any of them* 3

But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers. 4

Theorems

Theorem

.*There is no largest prime number*

Proof

.*Suppose p were the largest prime number* 1

.*Let q be the product of the first p numbers* 2

.*Then $q + 1$ is not divisible by any of them* 3

But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers. 4

Theorems

.The proof uses *reductio ad absurdum*

Theorem

.*There is no largest prime number*

Proof

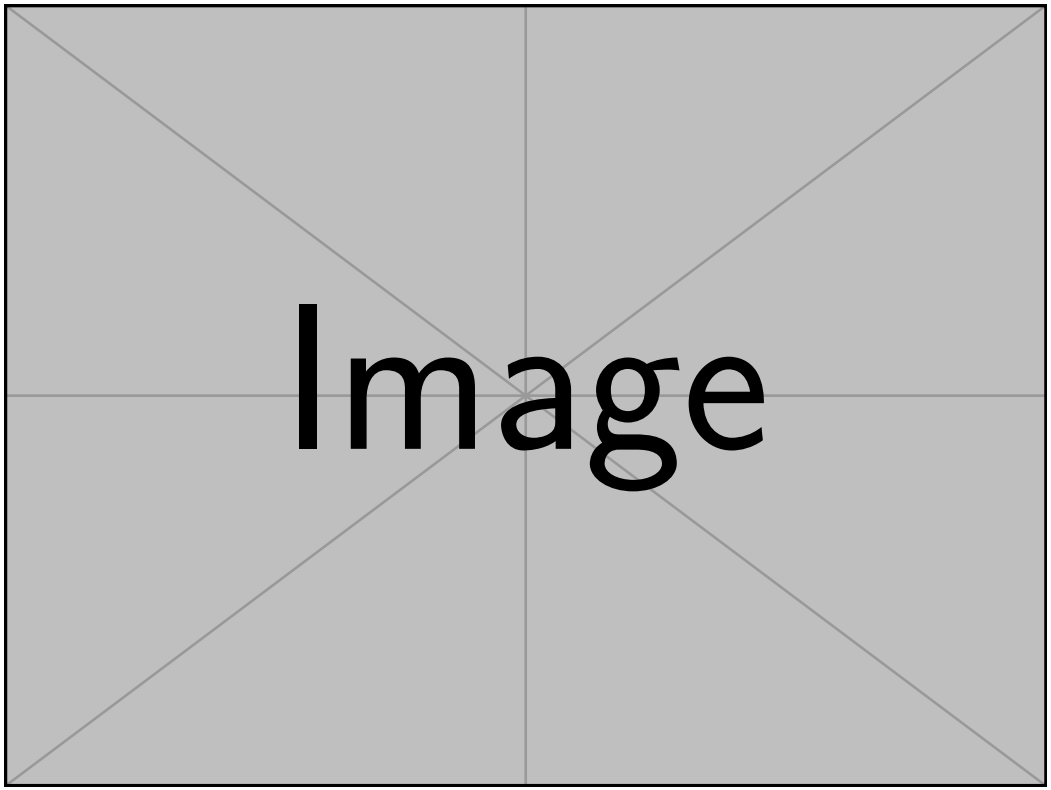
.*Suppose p were the largest prime number* 1

.*Let q be the product of the first p numbers* 2

.*Then $q + 1$ is not divisible by any of them* 3

But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers. 4

Zooming



```
\framezoom<1><2>[border=2](2cm,2cm)(2cm,2cm)
\pgfimage[height=5cm]{example-image}
```

mage

- The `beamer-rl` package swap the definition of `\blacktriangleright` with `\blacktriangleleft` in RTL context.

	`\blacktriangleright`	`\blacktriangleleft`
LTR context	▶	◀
RTL context	◀	▶

- In some cases you need to use `\babelsublr` command from `bebel` package to insert a left to right text within your right to left text, e.g if you need to insert a `pspicture` drawing in RTL context
